# Session: Shaping Data in Power BI

**From:** the English Premier League (EPL) match record

**To:** Results Table (ranking and performance summary per team)

**Via:** Power BI's Query Editor

Operations to transform the data:

- Duplicate datasets
- Select and rename columns
- Append (stack) two datasets
- Add new columns
- Group by
- Sort

# Resources to Do It Yourself

- Start with – Resources and Explanation PDF (has all links)
- Source Data (EPL match record): public GitHub link
- Download Power BI Desktop (free)
- Worked example: EPL Analysis. PBIX
